

Cisco Room Kit EQ

Inclusive collaboration for the modern conference room

Cisco Room Kit EQ is an AI-powered collaboration device solution that includes the multi-lens Quad Camera, the powerful Codec EQ computing engine, and other smart room peripherals to enable true-to-life video conferencing on any platform.

It integrates with up to three external displays and provides unparalleled camera and audio intelligence, combined with rich content sharing to create more inclusive video meetings from large conference rooms, boardrooms, training rooms, and auditoriums. The Room Kit EQ is a flexible bundle that makes it easy to add your room peripherals – taking the guesswork out of configuring and scaling your conferencing environment.

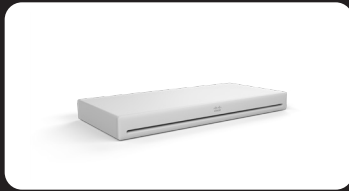

Features

- Codec EQ: AI-powered, standalone computing engine
- Triple-screen support
- 80 MP, multi-lens Quad Camera supporting equitable views
- Built-in loudspeaker and speaker extension option
- Built-in mic array, various audio input options, and adaptive noise removal
- USB-C and HDMI passthrough
- Native RoomOS and Microsoft Teams Rooms mode*
- 4K wireless and wired content sharing
- Advanced connectivity to integrate with room peripherals
- Room Navigator support for room controls and scheduling
- Unified management and analytics

* Availability coming soon in mid-2023

Frame your experience

Codec EQ standalone to power and connect your video conferencing environment

Room Kit EQ for UHD, equitable video collaboration from large workspaces

Room Kit EQ PTZ 4K for specialist AV scenarios with crystal-clear close-ups and powerful pan-tilt-zoom

Augment your Room Kit EQ experience with spatial audio pickup, presenter tracking, and accessories

Equitable video meetings

The powerful, multi-lens Quad Camera supports intelligent Frames for equal view for all meeting participants (available on Webex and third-party platforms) and People Focus for intelligent layout composition (available in Webex meetings), while machine learning-based, leading noise removal helps to block out unwanted distractions.

Stunning presentations

Triple screen support and dual content sources make for vibrant presentations. Single-cable USB-C passthrough brings instant BYOD, content share, and laptop charging, while the solution also supports 4K content via Webex, Miracast, and Apple AirPlay. Combined with the Cisco PTZ 4K Camera, it offers smart presenter tracking to any room or auditorium.

Multi-platform video conferencing

Run your device on RoomOS for native Webex meetings and powerful video interop with Microsoft Teams, Zoom, and Google; or configure as a native Microsoft Teams Rooms system with the ability to join full-featured Webex meetings (coming soon).

Intelligent workspaces

Presence sensors allow for automatic “wake-up” when someone enters the room and power intelligent people count for usage metrics and resource allocation. Intuitive touch controls, AI-enabled workflows, and customizations enable a seamless workspace experience, while built-in environmental sensors in the touch panel help support workspace optimization and wellbeing.

Flexible integration

The Codec EQ enables PoE, HDMI, and USB integration with multiple Cisco cameras, microphones, and the Room Navigator touch device, alongside third-party audio systems. Better still, it also offers seamless connection with leading third-party display vendors to enhance user experience and drive energy savings.

Unified admin and analytics

It is built for both cloud and on-premises deployments, protecting your investment. Room Kit EQ can be deployed as a fully cloud-managed solution in Control Hub, offering a seamless admin, monitoring, troubleshooting, and analytics experience for your entire deployment.
