

Home Office

For those who have a dedicated home office, it's essential to design it in a way that lets you work as efficiently and securely as any corporate office—and arguably a lot more comfortably.

The **Cisco Desk** is your instant office, perfect for video conferences, presentations, and brainstorming thanks to its 1080p touchscreen and 24-inch anti-glare display. You'll always look your best with camera intelligence that automatically frames you in the best view, even if you need to stand up or stretch. And **Webex Assistant** gives you hands-free, voice-activated control to start your meetings or take notes.

Not to mention the all-new **Bang & Olufsen Cisco 980** with Bluetooth 5.1 that delivers an incredible audio experience, alongside excellent noise cancellation for when you need to focus.

If you want to take your next meeting somewhere a little more comfortable, **Cisco Room Bar** turns any TV or monitor into a professional video conferencing space—all controlled by the **Cisco Room Navigator**. And of course, with end-to-end meeting encryption activated you can add another level of security for those highly sensitive discussions.

Top off your home office with a full **Meraki networking** stack for best-in-class security, switching, and wireless connectivity. It even offers cellular backup, so if your internet goes down, you'll still stay connected.
