

Lobby

As we begin to make our way back into offices, we'll need to transform them to look and act much differently than before. To find the right balance between productivity and safety, offices will need to get a whole lot smarter, starting from the moment you arrive.

Creating a smart building begins with the lobby. Whether you're a visitor or a returning employee, your experience should be quick and easy.

Meraki Cameras track occupancy, keeping count of people when they enter and exit the building. They also monitor safety and well-being conditions like temperature, noise levels, and air quality. Powered by **Cisco Spaces**, it pulls this data, as well as sensor data from Cisco devices, and even the Wi-Fi access points, into one place.

When it's time to check in, the **Cisco Desk Pro** acts as a self-service **digital kiosk**. It can also be used to display digital signage, like building policies, safety information, occupancy rates, and environmental conditions.

Visitors simply enter their name and can easily identify an available workspace. If they need help finding their way around, the **Cisco Desk Pro** uses facial detection to see them coming—even if they're wearing a mask—and connects them straight to a virtual receptionist.

With Webex and Meraki, getting acclimated to your new office has never been easier!
