Power business calls on your personal mobile device

Now you can place Webex calls and get the same familiar experience that you enjoy on your cell phone.

Webex Go makes it easy to extend the enterprise collaboration experience to your personal mobile phone and other devices. It lets you make and receive calls and take advantage of enterprise-grade calling features, like compliant call recording without a separate app—all while keeping your personal phone number separate from your business number. There's no need to use your own data plan for your business calls. Because calls are routed over a mobile network, you'll get much higher media quality compared to calls made via a separate app on your device.

Built for today's increasingly mobile, bring your own device (BYOD) world, Webex Go reduces the burden on IT by essentially making personal mobile devices secure endpoints on your business phone system. It provides centralized, enterprise-level control and management via Control Hub, and lets IT admins apply business compliance policies, and view analytics for business calls made with personal mobile devices.

Mobile first, native experience

Enterprise grade calling

Better media quality

Benefits

Familiar phone features
Enjoy a native calling experience on your mobile phone, wherever you are, without a separate app

One-device communication
There's no need to carry two mobile phones to separate your business and personal contacts and communications

Supports BYOD
Use your personal phone for business calls at no charge, and free IT from the need to issue corporate mobile phones

Enable your complete mobile business
Keep your business identity front and center on communications, protect personal privacy, and extend business features to mobile calls

Empower IT
Provide flexibility and mobility to employees while centralizing management and control through a single pane of glass

Simplify compliance
Enable and apply compliance policies to mobile calls made with the business line on personal mobile device

Enterprise-grade calling in the palm of your hand

Webex Go lets you take advantage of a rich set of Webex Calling features, including:

Extension dialing: Contact your co-worker or a group within your organization by dialing their extension

Hold/resume: Easily place a call on hold and resume again, for complete control

Conference: Merge two phone calls into one or easily go from a 1:1 call and start a conference call

Call pull: Quickly move your call between Webex devices

Compliance call recording: Admins can set policies for recording based on business needs

Call park/retrieve: Streamline communications by parking your call to resume on another device or by another employee

Track every call: Missed calls appear in your mobile call history and will connect to the Webex voicemail

Presence: When you're on a business call on your mobile phone, your Webex availability shows 'on-a call' status

Collaborate your way: Set preferences to use Webex Go as default for specific contacts or to prompt for selection

Elevate calls to video or a meeting: Seamlessly move a Webex Go call to the Webex App for an engaging video call or a meeting
